

ROKO® PROFESSIONAL SURFACE QUAT

DESCRIPTION

Washing-disinfecting liquid with bactericidal and fungicidal properties intended for disinfection: 1. in the food industry: rooms, surfaces and devices in contact with food and animal nutrition. For use in CIP circulation systems and in spray form. 2.in public places, including the medical area (outside the clinical area): walls, floors, toilets and appliances, fittings, furniture that are not medical devices

Active substance: Quaternary ammonium compounds, benzyl-C12-16-alkyldimethyl, chlorides CAS: 68424-85-1 [incl. 20 g / 100g]

COMPOSITION

Quaternary ammonium salts, alcohol, nonionic surfactant

TECHNICAL REQUIREMENTS

AppearanceTransparent or slightly opalescent liquid

pH8,0 ± 1,5

Density at 20°C, g / cm³.....0,985 ± 0,050

APPLICATION

How to use: Introduce the working solution into the dosing device in the CIP system or apply it to the surface with a mop or a cloth. The preparation can be used for manual washing and disinfection as well as for soaking and spraying. Bactericidal activity 0.5% (0.5 g / 100 g) during the contact period of 5 minutes, temperature 20 ° C, fungicidal activity 0.8% (0.8 g / 100 g) during the contact period of 15 minutes, temperature 20 ° C . After the required disinfection time, the surfaces should be thoroughly rinsed with drinking water quality.

Note: The preparation is intended for professional use.

Recommendations: In case of liquid spillage, immediately wash the surface with water. Wash hands after use. Use in well-ventilated rooms. Store upright in a cool place. The ventilation time after using the preparation is 10-15 minutes. Prevent the undiluted product from entering drains, surface waters and groundwater. Protect against contamination of the drinking water intake. Do not inhale vapors of the product. Do not eat, drink or smoke while using the product.
