

## ROKO® PROFESSIONAL SURPOR ACID

### DESCRIPTION

A professional product based on glycolic acid for cleaning porcelain stoneware surfaces and microporous floor tiles, resistant to acids.

- Removes dirt, limescale, rust and cement remains
- Removes dirt from joints
- Contains biodegradable glycolic acid
- Excellent wetting properties
- Does not cause corrosion
- Free of phosphates
- Pleasant and long-lasting fragrance

### COMPOUDS

non-ionic surfactants, perfume

### TECHNICAL REQUIREMENTS

Appearance .....transparent or opalescent liquid

pH.....~1.0

Density at 20°C, g / cm<sup>3</sup>.....1.060 ± 0.020

### APPLICATION

How to use: Dilute the concentrate according to the method of cleaning. Moisten the cleaned surface with the preparation. Then let the solution act for 5-10 minutes. Wipe the surface with a scrubber. Then suck out dirty fluid and rinse with water. Always use cold water. Recommendations: The product is suitable for cleaning stoneware and anti-slip tiles. Do not mix with agents containing chlorine. Do not use on marble and natural stone floors containing limestone.  
For professional use only!
